Motivation and Why this topic interests you

- Stock-return models often treat stocks as independent time series, ignoring industry and other relations
- Feng et al. (2019) propose RSR: Temporal Graph Convolution encodes relations between stocks
- This project replicates RSR vs. a no-relation baseline: does relation information improve next-day return ranking?
- Why me: my multi-agent trading system lacks any cross-stock relation signal

Stocks linked by industry relations (RSR relation graph)
